NAME: Y. RAJ MARTIN CROVE (VH NO: 3539)

DEPT: MECHANICAL ENGINEERING

COLLEGE: VEL HIGH TECH ENGG COLLEGE

INSTITUTE: NAGOYA INST. OF TECHNOLOGY

COUNTRY: JAPAN

HIGHER EDUCATION: MASTER OF SCIENCE IN

MAIL ID: martin.crovec@gmail.com

CONT. NO: 9840124858

I have passed out from vel high tech in the year 2014, mechanical department. I had a thirst for doing higher education, through the help of college I learnt there were lots of opportunities to pursue higher studies in many countries with the help of our institution , for which they are providing scholarships in top colleges. One of those colleges was Nagoya Institute of technology, based in the aichi prefecture in Japan.

My college life was quite joyful, with all the faculties providing support and motivating students either in pursuing higher education or searching a job. All the curriculum seemed well suited for the industry and it helped me a lot in solving engineering problems with the knowledge and skill obtained from the college. The seminar sections and technical symposiums conducted in our institution helped me a lot in facing the crowd and presenting my idea in front of the scholars.

I am very much grateful to have studied in this institution as pursuing higher education is beyond my dream and vel tech helped me to realize this dream. I am aware of the efforts taken by the management to ensure its students, that they get good exposure to the outside world. I am sure vel tech will become a global

powerhouse in producing world class engineers and contribute to the growth of our nation.

I had applied for this scholarship and got selected. Initially I was required to propose the research plan, which I was interested to do in Japan, then the professor after scrutinizing the proposal gave the go sign and after that two level of selection finally I achieved my dream.

My aim is to do job there, in the research field in top companies like Toyota. Become a pioneer in mechatronics, gain sufficient knowledge and come back to India to guide and empower students in producing quality education and bring our Nation to its glorious status.

I thank the management, Founder and everyone in having supported me to pursue higher education in documentation. Surely I will bring up my best abilities and make vel tech proud.
